

I am an XM subscriber who also listens to regular broadcast radio. I see no logical reason for the NAB to oppose XM's ability to provide local weather and traffic.

At the end of the day, my listening habits are based on selection and service. I want XM radio to offer weather and traffic on demand as they propose. Just think, wouldn't it be nice to travel in your car and get a traffic and weather report instantly, versus waiting 15 minutes to 1/2 hour. What a concept!!

Thank you in advance for your consideration.
